

XVIII. *Descriptions of two new Shells. By Captain Frederic Marryat, R.N. F.L.S.*

*Read February 18, 1817.*

MITRA.

MITRA ZONATA.

TAB. X. FIG. 1, 2.

MITRA epidermide luteâ fulvo-marmoratâ, anfractibus infernè basi nigris, columellâ quinque-plicatâ.

*Habitat* in mare Mediterraneo.

Anfractus basi nigri, crenato-striolati.

This shell was taken up near the port of Nice in the Mediterranean, adhering to a sounding-lead, in very deep water. I have no hesitation in pronouncing it to be a new species, as I cannot find it described by any author.

CYCLOSTREMA.

CHARACTER GENERICUS.

Testa depressa, perspectivo-umbilicata; apertura circularis.

CYCLOSTREMA CANCELLATA.

TAB. X. FIG. 3, 4.

C. testâ albâ, lineis longitudinalibus et transversis elevatis decussantibus, inde cancellatâ.

*Habitat*
